6.6 CE0660 – Steel Structures II

(1) GENERAL

SCHOOL	ENGINEERING SCHOOL		
ACADEMIC UNIT	CIVIL ENGINEERING DEPARTMENT		
LEVEL OF STUDIES	UNDERGRADUATE		
COURSE CODE	**CE0660**	**SEMESTER**	**6**
COURSE TITLE	**Steel Structures II**		

INDEPENDENT TEACHING ACTIVITIES *if credits are awarded for separate components of the course, e.g. lectures, laboratory exercises, etc. If the credits are awarded for the whole of the course, give the weekly teaching hours and the total credits*	**WEEKLY TEACHING HOURS**	**CREDITS**
	4	5
Add rows if necessary. The organisation of teaching and the teaching methods used are described in detail at (d).		

COURSE TYPE *general background, special background, specialised general knowledge, skills development*	Special Background Course
PREREQUISITE COURSES:	
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek
IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes
COURSE WEBSITE (URL)	https://eclass.uniwa.gr/courses/PEY158/

(2) LEARNING OUTCOMES

Learning outcomes

The course learning outcomes, specific knowledge, skills and competences of an appropriate level, which the students will acquire with the successful completion of the course are described.

Consult Appendix A

- *Description of the level of learning outcomes for each qualifications cycle, according to the Qualifications Framework of the European Higher Education Area*
- *Descriptors for Levels 6, 7 & 8 of the European Qualifications Framework for Lifelong Learning and Appendix B*
- *Guidelines for writing Learning Outcomes*

The course is a continuation of the introductory course Steel Structures I and contributes to the students' contact on specific topics in the design of Steel structures.

The material of the course aims to deepen the students in the design of metal structures. To learn the special provisions of the regulations and the current technological developments in the issues of metal structures.The course aims to give the students theoretical and practical developments in technology and in the design of steel structures. During the course students learn the details design and developments of steel structures . Special regulations and design code, according to Eurocode 3, (EC3).

After the course the student will be able to

- Shape and design the structural form of a metal structure and can suggest frames and system to take vertical and horizontal loads (wind, earthquake) acting on the metal structure.

- Design steel structures at ulitimate limit states and servisability limit state.
- Design of steel connections
- Implement the provisions of the European Regulation for steel structures design, EC3, and designing steel structures in accordance with it.

General Competences

Taking into consideration the general competences that the degree-holder must acquire (as these appear in the Diploma Supplement and appear below), at which of the following does the course aim?;.

Search for, analysis and synthesis of data and information, with the use of the necessary technology	*Project planning and management*
Adapting to new situations	*Respect for difference and multiculturalism*
Decision-making	*Respect for the natural environment*
Working independently	*Showing social, professional and ethical responsibility and sensitivity to gender issues*
Team work	*Criticism and self-criticism*
Working in an international environment	*Production of free, creative and inductive thinking*
Working in an interdisciplinary environment	*……*
Production of new research ideas	*Others…*

Specifically, students will be able to:

- Perform analysis and desing steel structures according to Eurocode 3.
- Use the suitable analysis software to perform analysis and desing of structures.
- Participate in a team of engenneers and express his opinion about the desing of the project.
- Execute an autonomous work in his private office for desinging or construction of structures
- Search, analysis and synthesis of data and information, using the necessary technologies.
- Decision Making.
- Autonomous work

(3) SYLLABUS

The content of the course is summarized below:

1. Description limit state design, ultimate limit state and serviceability limit state
2. Stability Control, Calculation of Lateral tortional buckling resistant of a steel member.
3. Design of steel member in bending and compression
4. .Design of connections
5. Bolt connections
6. Weld connections
7. Study and forming of steel construction. How to create the static models of steel structures
8. Practical issues in steel construction, construction stages, erection study
9. Semester project

(4) TEACHING and LEARNING METHODS – EVALUATION

DELIVERY *Face-to-face, Distance learning, etc.*	Face-to-face or / and distance learning
USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY *Use of ICT in teaching, laboratory education, communication with students*	Teaching using ICT, Communication and Electronic Submission. Teaching using special software analysis
TEACHING METHODS *The manner and methods of teaching are described in detail.* *Lectures, seminars, laboratory practice, fieldwork, study and analysis of bibliography, tutorials, placements, clinical practice, art workshop, interactive teaching, educational visits, project, essay writing, artistic creativity, etc.*	

Activity	***Semester workload***
Lectures	52
Classwork	38
Preparation for Project	10
Personal Study	10

The student's study hours for each learning activity are given as well as the hours of non- directed study according to the principles of the ECTS		
	Course total	**110**

STUDENT PERFORMANCE EVALUATION *Description of the evaluation procedure* *Language of evaluation, methods of evaluation, summative or conclusive, multiple choice questionnaires, short-answer questions, open- ended questions, problem solving, written work, essay/report, oral examination, public presentation, laboratory work, clinical examination of patient, art interpretation, other* *Specifically-defined evaluation criteria are given, and if and where they are accessible to students.*	Language of evaluation: Greek Final written examination: 60% Preparation for the project: 40%
